## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 2 and 4-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Takeuchi et al. (US Patent No. 6,366,490 cited by Applicant).

Takeuchi et al. discloses a semiconductor integrated circuit device having all the elements as recited in claims 1, 2 and 4-7 as follows:

- unit cells each including a cell transistor and a ferroelectric capacitor connected between a source and a drain of the cell transistor;
- memory cell blocks ( 4 blocks in Fig. 4) each including the unit cells connected in series between a first terminal and a second terminal and a block select transistor connected between the second terminal and a third terminal;
- bit lines each of which connects commonly the third terminals of the memory cell blocks (BL0 connecting the third terminals of the two

upper blocks and BBL0 connecting the third terminals of the two lower blocks);

- word lines (WL0-WL7);
- block select signal lines (BS0, BS1, BS2, BS3);
- plate lines (PL0 and BPL0);
- plate line driver (PDs, Fig. 4);
- the memory cells blocks connecting to each of the plate lines connected to the first and second driver circuits are connected to different word lines and different block select signal lines (the memory cells of the two upper blocks have different word lines (WL0-WL15) and different block select lines BS) and BS2, Figs. 4 and 5).

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3 and 8-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takeuchi et al..

The only difference between claims 3 and 8-10 is the use of a second row decoder and a second column decoder. However, the use of a plurality of row and column decoders in a memory device having a plurality of blocks is well-

known in the art to provide select signals to the word lines and the bit lines. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use a plurality of row and column decoders in order to provide select signals to a memory cell in a memory device.

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Takashima discloses a nonvolatile semiconductor memory device having ferroelectric capacitors.
